SUMMARY

I am an enthusiastic technologist, an advocate of Agile starting out my career in leadership and management of Agile software development teams. With past and current employers, I have had the opportunity to lead development teams of up to 8 developers however, such opportunities came with responsibility which I gladly accepted, tackled and excelled in handling. My ability to always look on the bright side mixed in with confident communication and friendly personality allows me to constructively get along with a wide range of people in varying positions. I bring strong analytical thinking which allows me to challenge those around me and be able to either solve or foresee problems in a wide area of software development. Being innovative, open-minded and driven by the pure will to succeed I strongly encourage colleagues to succeed with me or even better, succeed more than me.

TECHNOLOGIES & TOOLS

CORE	Java, Agile SDLC, a wide range of AWS offerings, GWT, Maven, Agile, Springboot,
VARIOUS	CI, Sonar, Eclipse, Android, Atlassian Cloud (Jira, Confluence, Bamboo), Mockito, Junit, MySQL, Mongo DB, Git, C++, TinCan API, Adobe Captivate, Articulate Story Line, Learning Record Store (LRS)
IT INTERESTS	Gadgets, building PCs/overclocking, WordPress, CSS, React, Go, SSL, Linux

CERTIFICATIONS

CERTIFICATION	LICENSE	DATE
Certified Scrum Master	000456150	October 2015
Certified Associate, Java SE 7 Programmer	OC1427658	March 2015
Lean Six Sigma White Belt	C435	May 2015

EDUCATION

NAME	TYPE OF STUDIES	DATE
Manukau Institute of Technology Auckland, NZ	Bachelor of Engineering Technology - Major in Network Engineering	2003 – 2006
PROJECTS	Created a Java Swing front-end for an image processing tool written in C++ Completed CCNP and Cisco Firewall course work.	

LANGUAGES

English	native
Czech	proficient
Polish	proficient
Swedish	elementary

EXPERIENCE

NAME	LOCATION	POSITION	DATE
Berrycloud	Prague, CZ	Lead Developer	04.2015 – present

Lead Developer for a UK based start-up where my main role is a Scrum Master for a team of five cross-functional developers building a SaaS Learning Management System (LMS). The LMS is used to deliver a Stress, Depression and Anxiety e-learning course for an American based medical provider. I am responsible for mitigating impediments, applying Agile milestones, improving team communication, settings up and enforcing a formal development processes, release management and ultimately administrating the live account with over ten thousand active users. I have been entrusted to maintain a number of AWS accounts where I schedule updates, down time, set up monitoring and ensure scalability, resilience and security. I have been actively involved in hiring and team review processes.

In a clash of roles, at times I act as the Product Owner gathering information from customers and turning it into back log items.

Infor Global Solutions	Prague, CZ	Software Architect	09.2013 – 03.2015

Involved in designing a scalable cloud-based (AWS) proof of concept of Infor's flagship middleware product. Led an Agile focused development team of four junior developers in charge of the UI aspect of the project. This role also had me involved in requirement gathering, architectural design and mentoring. As the senior team member I played an active role in expanding the team by finding, interviewing and hiring a further four developers.

Infor Global Solutions	Prague, CZ	Software Developer	03.2012 – 08.2013

Member of a Scrum team working on a ERP solution. This was a purely technical and cross functional role with the main focus being on Continuous Delivery by way of automating installer package generation, installation and execution of integrations tests on a fleet of VMs.

CA Technologies	Prague, CZ	Software Developer	03.2011 – 02.2012

Member of the Core UI team working on CA's Virtualization product. Mainly responsible for UI side development using GWT. This team was also the main driver in fully re-writing the custom UI dashboard in GWT and HTML5.

Gemalto	Prague, CZ	Software Developer	01.2010 – 02.2011

Developing customizations for Gemalto's Over-The-Air (OTA) platform prior to deployment on a customer's site. Tasks included writing plug-ins to update SIM cards and modifying JSP based UI. Based on my level of English I was helping colleagues in the US office on a project for a Canadian customer which involved creating a multi-threaded tool interfacing to multiple 3rd party Roaming solutions handling 200,000 requests per day. I was single handedly and autonomously responsible for development, testing, integration and final on-site deployment. The success of this project marked a change where more US based projects were assigned to the Prague office.

Direct Pojišťovna	Prague, CZ	IT/IS Analyst	01.2009 – 12.2009

Working within the Insurance domain gathering requirements, providing time estimates and designing implementations while liaising with the support center based in Warsaw, Poland. For an internal project I implemented an automated front-end testing framework based on Selenium to test a client-facing web application. My work with Selenium was also used to automate some in house processes such as document template uploading.

First Data Utilities	Auckland, NZ	Software Developer	12.2006 – 09.2008

Member of the R&D team working with Agile, TDD and XP in rewriting a major component of the Customer Information System (CIS) purely in Java using SOA architecture.

Talking Computers Limited	Auckland, NZ	Software Tester	08.2004 – 11. 2006

Part-time Junior software tester responsible for the entire QA process. Provided support to new and existing clients by settings up remote access, VPN tunnels and on-site visits.
